

2014年度 宇宙環境研究グループ原著論文

“Hyperthermal atomic oxygen beam irradiation effect on the Ti-containing DLC film”, Kazuhiro Kanda, Kazuhiro Fukuda, Ryo Imai, Masahito Niibe, Sinya Fujimoto, Kumiko Yokota, Masahito Tagawa, *Diamond and Related Materials*, Vol.41 (2014) pp.49-52.

“レーザーデトネーション法による低軌道宇宙環境地上シミュレーションとEUV”, 田川雅人, 横田久美子, *レーザー研究* Vol.42, No.1 (2014) pp.50-54.

“Multiple-composition hyperthermal atomic beams formed by a laser-induced plasma for planetary environmental studies”, Kumiko Yokota, Daiki Watanabe, Junki Ohira, Masahito Tagawa, *Physica Scripta*, Vol.T161 (2014) 013035.

“A synchrotron radiation photoelectron spectroscopic study on the oxidation of Si in diamond-like carbon film by hyperthermal O-atom beam”, Kumiko Yokota, Masahito Tagawa, Akitaka Yoshigoe, Yuden Teraoka, *Journal of Surface Analysis*, Vol.20 No.3 (2014) pp.221-225.

“Effect of Atomic Oxygen Irradiation on Field Emission Cathodes in Low Earth Orbit”, Atsuko Shimada, Yoshinobu Tanaka, Yasushi Ohkawa, Koji Matsumoto, Masahito Tagawa, Makoto Matsui, Yoshiki Yamagiwa, *Aerospace Technology Japan*, Vol. 12(2014) No. ists29 p.Pb_59-Pb_64.
